Audubon Society of Rhode Island

RHODE ISLAND OSPREY REPORT

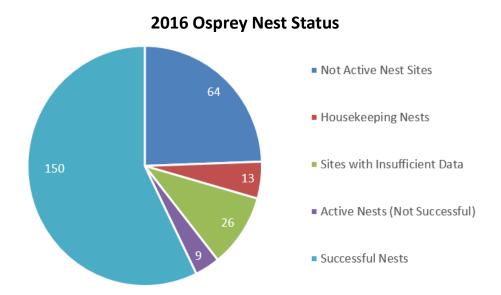

During the 2016 Osprey breeding season, 108 volunteers spent over 1,358 hours monitoring 236 nests. Over 2,700 observations were submitted to document the health of the Osprey population in Rhode Island.

There has been a steady increase in the Osprey population since 1977, when only 8 fledglings were observed.

Of the 159 nests deemed **active** this year, 150 were classified as **successful**, producing at least one fledgling. By the end of the 2016 season, a total of 297 Osprey fledglings were observed.

The Rhode Island Osprey Monitoring Program

The Osprey Monitoring project was initiated in 1977 by the Rhode Island Department of Environmental Management (RIDEM). The goal was to record the breeding success of Ospreys and to document their recovery from the effects of the pesticide DDT.

In 2010 RIDEM passed management of the project to Audubon. Today, volunteer monitors continue to observe the state's Osprey population.

Observing the Rhode Island Osprey population provides information about the health of local ecosystems. By watching these sentinels, we learn more about wildlife and natural habitats as well as the level of human impact on these special places and unique species.

It is a great testament to the dedication of Audubon's volunteer monitors that this citizen-science program continues to thrive and record important data and photographs of these amazing raptors.

2016 Summary of Monitoring Results, Continued

As in 2015 and 2014, Barrington and South Kingstown produced the most fledglings in the state. In 2016 monitors observed 42 fledglings in Barrington while South Kingstown came in a close second with 41. To see results from other towns refer to Table 2 starting on page 6.

To asses the level of breeding success across the state, we track the number of fledglings observed per each nest monitored, per active nest and per successful nest.

- Number of fledglings observed as a percentage of all nest monitored was 1.26
- Number of fledglings observed as a percentage of active nests was 1.87
- Number of fledglings observed as a percentage of all successful nests was 1.98

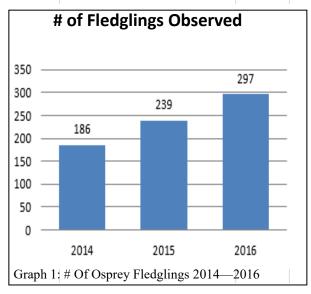

2016 Observational Data at a Glance		
Monitors	108	
Hours Monitored	1,358	
Nest Sites with Data	236	
Nest Sites with Insufficient Data 26		
Inactive Nest Sites	64	
Housekeeping Nests	13	
Active Nests	159	
Successful Nests *Subset of Active	150	
Fledglings	297	

Monitoring in Massachusetts

Audubon monitors also observe several nests close to the Rhode Island border in Massachusetts.

The following nests were not included in the table starting on page 6.

Seekonk: Leavitt Street; 2 fledglings Swansea: Merriman's Pond 2; 1 fledgling Swansea: Merriman's Pond 3; 1 fledgling

Glossary of Monitoring Terms

Insufficient Data: Observations were inconclusive or no observations were made

Inactive: No breeding-related behavior observed

Housekeeping: Osprey observed at nest but breeding behavior

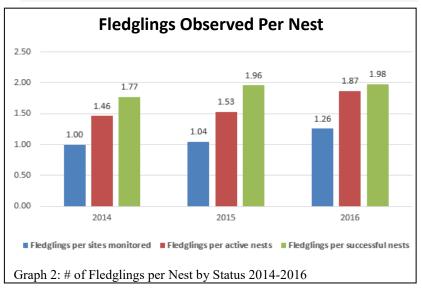

not sustained

Active Nests: Mating and/or incubation behavior observed

Successful: Fledgling (s) observed. This category is a subset of

Active nest:

Fledgling: Young bird with flight feathers

Interested in Monitoring Osprey nests in 2018?

See page 14 for information!

Monitoring Osprey Through Citizen Science

This long-running citizen science program is made possible by the efforts of dedicated volunteer monitors. Audubon Society of Rhode Island Osprey monitors put in long hours to ensure that they compile consistent and accurate data.

In addition to observing their assigned Osprey nests, monitors also identify new nests, photograph behaviors and document nest sites.

For a list of the 2016 Osprey monitors refer to Table 1 on page 4.

2016 Osprey Monitors

The Osprey monitoring program would not be possible without dedicated volunteers. Following is a list of the volunteers who reported on the status of 236 nest sites across Rhode Island in 2016.

Table 1: 2016 Audubon Society of Rhode Island Osprey Monitors

Osprey Nesting Observations: 1977 - 2016

Below is a graph comparing Osprey nest observations over the life of the program. The number of **active** nests, **successful** nests and number of **fledged young** are included in the comparison. The result shows a steady increase in all areas over the past thirty-eight years that the program has been in existence. Given that the program is based on citizen science, one must be careful when making assumptions from the data. Several factors (e.g. number of monitors, their time in the field and knowledge level) can impact the amount and accuracy of the data captured. That said, the longevity of the program, monitor training and consistent results indicates a clear pattern regarding the breeding success of the Osprey population in Rhode Island.

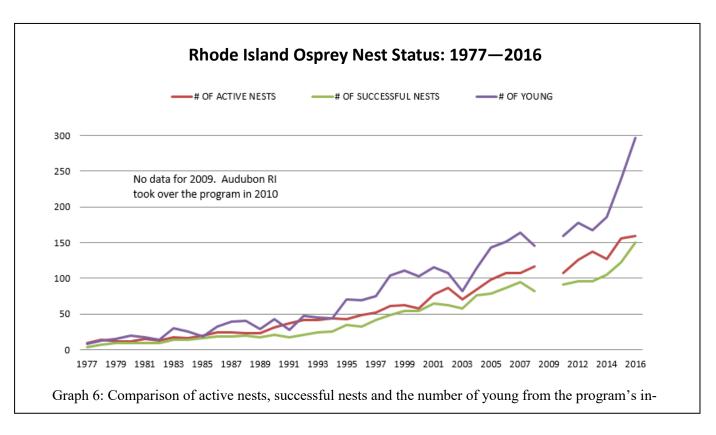

Photo 4: 131 Adams Point Road, Barrington, 2016 Valerie Fuchs

Shakespearean Osprey

OSPREY HAVE BEEN RECOGNIZED IN WRITINGS FOR OVER 400 YEARS. IN 1608 SHAKESPEARE USED THE OSPREY IN HIS PLAY **THE TRAGEDY OF COR- IOLANUS** (ACT 4, SCENE 7); THE LINES ARE SPOKEN BY AUFIDIUS TO HIS LIEUTENANT ABOUT CORIOLANUS' PROSPECTS OF TAKING ROME BY FORCE.

"I THINK HE'LL BE TO ROME
AS IS THE OSPREY TO THE FISH, WHO TAKES IT
BY SOVEREIGNTY OF NATURE."

Osprey Nesting Activity in Rhode Island for 2016

Table 2 below displays the Nesting Activity of every Osprey nest that was monitored in 2016. The table is sorted alphabetically by town and displays the nest site name, breeding status and number of observed fledglings. A glossary of status-related terms is located on page 2.

2016 Osprey Program Interns

We would like to thank the interns who worked very diligently on the Osprey Monitoring program throughout 2016.

During the fall and winter of 2016 the interns focused on documenting the location, structure and condition of known nests. We plan to perform this assessment every three years. This will bring the data regarding the actual nests and their locations up-to-date and provide useful information for program monitors, scientists and people interested in visiting the sites.

Currently the data is being compiled and will soon be added to the database and map files.

Many thanks to the following interns:

- Keelyn Kotecki (URI)
- Amber Lema (Independent)
- Stephen Shannon (Barrington HS)
- ◆ Amber Silva (Providence College)
- Cat Sullivan (Rhode Island College)

Monitor Osprey Nests With Audubon!

Photo 20: Haffenreffer Nest, Little Compton, August 2016, Barbara Costa

Help protect Rhode Island's natural resources: **Volunteer with Audubon's Osprey Monitoring program!**

Collect important information regarding the health of Rhode Island's Osprey population, as well as the state's ponds, rivers and bays.

Monitors create their own weekly schedule; we ask that you observe your assigned nest(s) once a week from April through August. (Allowances are made for vacations and such!) If this sounds interesting, attend one of our orientation sessions (held in the spring) and join the fun!

To RSVP for one of the training sessions contact Jon Scoones at: jscoones@asri.org or call him at 401-245-7500 x3044. New monitors are required to attend one training session in the spring.

Learn more about the Osprey Monitoring Program:
Visit www.riosprey.info or contact Jon Scoones @ jscoones@asri.org

About Audubon Society of Rhode Island

The Audubon Society of Rhode Island is an independent not-forprofit environmental organization dedicated to protecting birds, wildlife, and their habitats through environmental education, advocacy, and land conservation. The state's first environmental organization, the Society now protects nearly 10,000 acres in a network of refuges, pristine properties and wildlife habitats. One of the largest

private environmental educators in the state, in 2015 Audubon staff taught approximately 20,000 people across the region. Audubon Society of Rhode Island is not affiliated with National Audubon.

AUDUBON SOCIETY OF RHODE ISLAND
