About Audubon	17

The Rhode Island Osprey Monitoring Program

The Osprey Monitoring Program was initiated in 1977 by the Rhode Island Department of Environmental Management (RIDEM). The goal was to carefully follow the state Osprey population as it recovered from the effects of the pesticide DDT used from the 1940s through the 60s in Rhode Island.

Although DDT had been banned in 1972, the chemical was still having a negative effect on the raptor population. In 1976 Osprey were designated as an endangered species. The first statewide count by RIDEM in 1977 yielded only 12 active nests. In the 1940s, before DDT, it was estimated that there were over a thousand nests between Boston and New York.

DDT had taken a major toll on the population of this fish-eating bird. The poison worked its way through the food chain, bio-accumulating in Osprey. The result was very weak eggshells which easily broke when incubated.

Since 1977 the Osprey Monitoring Program has been made possible by efforts of biologists, donors and volunteers

who have observed all known Osprey nests in Rhode Island and carefully recorded data on the number of checks fledged and status of each nest.

In 2009 no results were available and in 2010 RIDEM passed management of the project to the Audubon Society of Rhode Island. Today, nearly 100 volunteer monitors continue to observe the state's Osprey population.

By watching these sentinels, we learn more about wildlife and natural habitats as well as the level of human impact on these special places and unique species.

It is a great testament to the dedication of Audubon's volunteer monitors that this citizen-science program continues to thrive.

If you have questions regarding this report or the program please direct them to Jon Scoones, manager of the RI Osprey Monitoring Program.

Rhode Island Osprey Report

2018 Summary of Monitoring Results

Throughout the 2018 Osprey breeding season, Audubon Society Osprey monitors volunteered over 1,000 hours observing 193 nests across 30 communities in Rhode Island.

An additional 42 nests were not monitored or not enough data was obtained to be conclusive. Six nests were classified as **housekeeping** and another 21 were classified as **inactive**. Of the 166 nests deemed **active**, 144 were **successful**, producing at least one fledgling.

2017 & 2018 RI Osprey Data	2017	2018	Change
Monitors	110	93	-17
Hours Monitored	1340	1,066	-274
Nest Sites with Insufficient Data	38	42	+4
Nest Sites with Data	267	193	-71
Inactive Nest Sites	57	21	-36
Housekeeping Nests	24	6	-18
Active Nests	145	166	+21
Successful Nests <i>*Subset of Active Nests</i>	121	144	+23
Fledglings in Rhode Island	226	275	+49

The number of nests termed **active** and **successful** continue the gradual increase shown over the life of the program. The number of fledglings in 2018 has risen dramatically since 2014, supporting the hypothesis that Rhode Island provides the habitat and food necessary to support Osprey. For details regarding nests in Rhode Island refer to pages 5-15.

Photo #3: Breach Dr. 7/2018 M. Bonafede

Photo #4: Tiverton DPW 8/2018 L. Mendes

Massachusetts:

A total of 11 nest sites were monitored in Seekonk and Swansea, Massachusetts. Of the 11 sites, one was classified as active, one had no nest and nine were classified as successful. A total of 14 fledglings were observed from these nests. For details regarding these nests refer to page 15.

Photo #5: Colt State Park, Bristol 8/2018 L. Mendes

Glossary of Monitoring Terms

Insufficient Data: Observations were inconclusive or no observations were made.

Inactive: No breeding-related behavior was observed

Housekeeping: Osprey pair observed at nest but breeding behavior not sustained.

Active Nests: Mating and/or incubation behavior observed

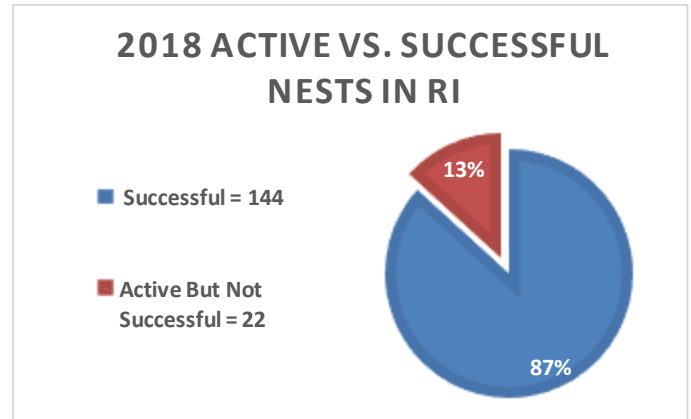

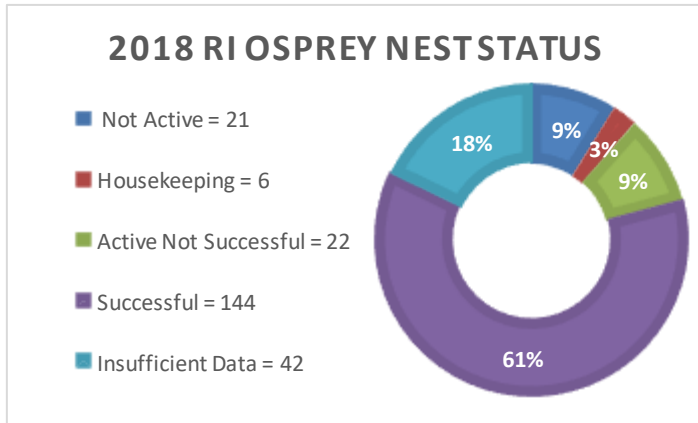

Successful: Fledgling (s) observed. This category is a subset of Active nests.

Fledgling: Young bird with flight feathers

Rhode Island Osprey Report

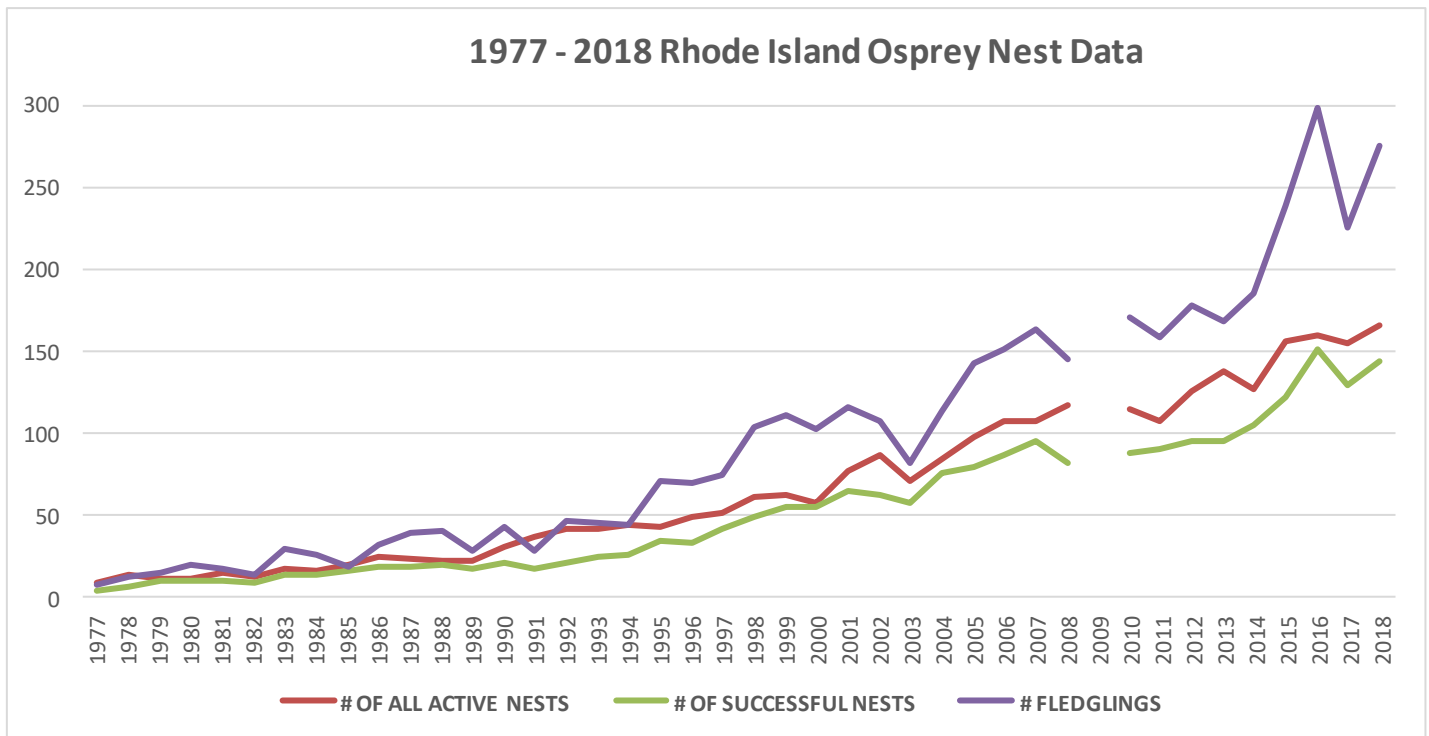

Osprey Nest Status

One goal of the Osprey Monitoring program is to determine the breeding status of Osprey nests across Rhode Island. Graph #1 below shows the breakdown of the nests in 2018 while graph # 2 shows the breakdown of active versus successful nests.

Graph #1: 2018 Status of Osprey Nests in Rhode Island

Graph #2: Active versus Successful Osprey Nests

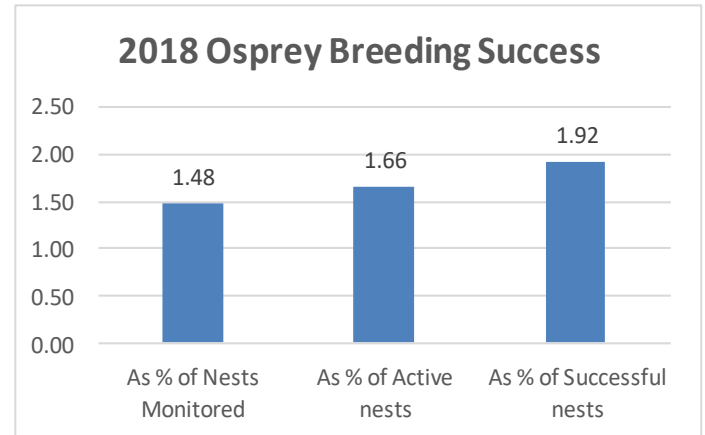

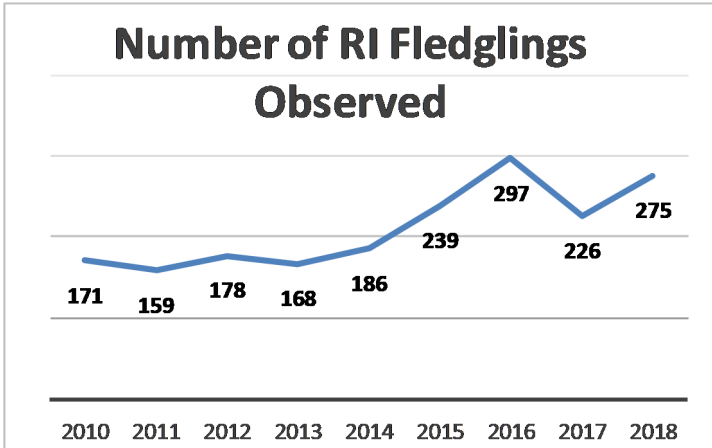

Graph #3: Osprey Observations 1977-2018

Graph #3 above compares Osprey nest observations over the life of the monitoring program. The number of **active** nests, **successful** nests and number of **fledged young** are included in the comparison. Since the program is based on citizen science, one must be careful when making assumptions from the data. Several factors (e.g. number of monitors, their time in the field and knowledge level) can impact the amount and accuracy of the data captured. That said, the longevity of the program, monitor training and consistent results indicate a clear pattern regarding the breeding success of the Osprey population. in Rhode Island. Page 3

Rhode Island Osprey Report

Osprey Fledglings

Tracking the number of fledglings produced from year to year is vital. Studies have estimated that the breeding rate needed to balance adult mortality in New England is between 0.8 and 1.0 fledged young per active nest. In 2018 nests monitored in Rhode Island had 1.66 fledglings per active nest and 1.48 fledglings per all nests monitored. These figures indicate strong population growth across the Ocean State.

Graph #4: Number of fledglings observed since Audubon began managing the program.

Graph #5: Fledglings as a percent of monitored nests.

Volunteer Osprey Monitors in 2018

Throughout the 2018 breeding season (April-August), 93 volunteers reported on 204 nests (193 in Rhode Island and 11 in Massachusetts). Monitors submitted over 3,500 observations and tallied a total of 1,066 hours in the field. Most monitors spent approximately 25 hours in the field, while a few logged in over fifty hours!

Audubon thanks all the volunteers for their continued support of the program.

Please Join Audubon!

The Audubon Society of Rhode Island is a non-profit organization that relies solely on private contributions, program fees and membership dues. Started in 1897 we are the oldest conservation group in Rhode Island, and one of the oldest in the world. The professional staff works on habitat conservation, education and environmental legislation.

We depend on members for support, so please join us in this important work.

Rhode Island Osprey Report

Distribution of Osprey Fledglings in RI

The graph to the right shows the distribution of Osprey fledglings across six regions of Rhode Island in 2016, 2017 and 2018.

While the East Bay region experienced a gradual decline in fledglings over the past three years, four other regions experienced growth over the last year. This growth was in spite of fewer nests being monitored from last year.

Distribution in the Northern Region was unchanged from last year as no nests are being monitored in that region.

Graph #6: Distribution of Osprey Fledglings in RI from 2016-2018

Osprey Nesting Activity in Seekonk & Swansea Massachusetts for 2018

Although the program is titled the “Rhode Island Osprey Monitoring Program”, a few nests located in Massachusetts have historically been included in the survey. Starting in 2016, the results for each state have been recorded separately. The table below displays the results posted by monitors for those nests located in Massachusetts.

TOWN (MASS.)	NEST NAME	STATUS 2018	FLEDGED 2018	FLEDGED 2017	FLEDGED 2016
Seekonk	Leavitt/Runnin Road	Successful	2	0	0
Seekonk	Mink Road	Successful	3	3	3
Swansea	Barneyville Road	Successful	1	1	1
Swansea	George St. / Nockum Hill	Active	0	3	3
Swansea	Johannis North Tree Nest	No nest	0	0	0
Swansea	Merriman’s Pond #2	Successful	2	1	1 (2015)
Swansea	Merriman’s Pond #3	Successful	1	2	0 (2015)
Swansea	Palmer River (Silveria)	Successful	1	2	3
Swansea	Bachelor Pad	Successful	3	2	1
Swansea	Swansea Golf Club N	Successful	1	2	1
Swansea	Swansea Golf Club S	Successful	1	2	2
		TOTAL	15	18	15

Monitor Osprey Nests With Audubon!

**Audubon Society
of Rhode Island**

Support Osprey With Your License Plate

Show your support for Osprey with Rhode Island Osprey license plates for your car! Purchase of an Osprey plate supports environmental conservation through education. The cost is only \$41.50 with \$20 supporting environmental education programs and \$21.50 for production of the plates.

Visit our website at www.asri.org/services

Help protect Rhode Island's natural resources:

Volunteer with Audubon's RI Osprey Monitoring Program!

Collect important information regarding the health of Rhode Island's Osprey population, as well as the state's ponds, rivers and bays. Create your own weekly schedule. We ask that you observe your assigned nest(s) once a week from April through August. (Allowances are made for vacations and such!) If this sounds interesting, you are welcome to attend one of our training sessions (held in the spring) and join the fun.

Please note that new monitors are required to attend one training session.

To RSVP for one of the training sessions contact Jon Scoones at: jscoones@asri.org.

About Audubon Society of Rhode Island

The Audubon Society of Rhode Island is an independent not-for-profit environmental organization dedicated to protecting birds, wildlife, and their habitats through environmental education, advocacy, and land conservation. The state's first environmental organization, the Society now protects nearly 10,000 acres in a network of refuges, pristine properties and wildlife habitats. One of the largest private environmental educators in the state, in 2015 Audubon staff taught approximately 20,000 people across the region. Audubon Society of Rhode Island is not affiliated with National Audubon.
